INTRODUCTION

Ask the land.
Make with your hands.

Observe, repair and create at a shared farm in Goyang, South Korea.

playworkgrow.club/en/

THE QUESTION

From a solo pastime to a shared inquiry.

A farm where questions and projects continue beyond a single visit.

01 Record a change and compare it on your next visit.

02 Repair a tool and leave instructions for the next person.

03 Explore technology and art on their own terms.

OUR DIFFERENCE

The farm is where the work begins.

Weather, materials, signs of use and human perception raise new questions each time.

01 Place — return to the same spot and notice what changes

02 Continuity — pair repair with useful documentation

03 Expression — value artistic inquiry in its own right

01 / OBSERVE

Read the farm’s less visible changes.

Put photographs and impressions alongside readings of light, temperature and soil.

01 Source principle: TechRice links places, devices, sensors and readings

02 Adaptation: add timestamps, units, missing data and human observations

03 Your starting point: three sentences about light and colour in one place

02 / REPAIR

Think of the next person using a tool.

Explain where a tool is, its condition and how it can be used again.

01 Source principle: QR Inventory connects an item ID with its status

02 Adaptation: add photos, checks, repair history and short instructions

03 Your starting point: a name, location and condition card for one object

03 / CREATE

Express light through the folds of paper.

Explore structure, material and energy to give your question a physical form.

01 Source idea: Solar Paper Lantern brings light, paper and energy together

02 Adaptation: begin with paper models, then assess current components and safety

03 Your starting point: sketch a paper structure and mark a path for light

YOUR JOURNEY

Begin with curiosity, not expertise.

Choose an interest, try a small action and leave yourself a next question.

01 01 Discover — choose a question about observation, tools or light

02 02 Prepare — start on your own with a photo, note or sketch

03 03 Work together — join a small team in the planned first season

04 04 Continue — use what you record to begin the next experiment

FIRST SEASON / PLAN

Twelve weeks of small experiments.

Six three-hour sessions, every other week. Designed around three teams of four.

01 Sessions 1–2 · explore the setting and choose questions and roles

02 Sessions 3–4 · build small prototypes, compare records and revise

03 Sessions 5–6 · test again and document the next steps

MEMBERSHIP / PLAN

A clear group size and membership fee.

First-season capacity: 12 people · KRW 360,000 per person for 12 weeks

01 Planned inclusions: six sessions, basic shared tools and consumables, documentation guidance

02 Outside the plan: personal equipment, specialist materials, meals and transport

03 Membership covers scheduled sessions, not unrestricted access to the premises.

04 Start dates, facilitators, detailed support and refund terms will be published before enrolment.

OUR PRINCIPLES

A shared farm.
Shared commitments.

Membership fees support preparation and the running of shared activities.

01 Our operating model does not rely on property rental revenue.

02 Different contributions through technology, art and observation are valued.

03 You choose whether to share your work, photos and records.

04 We distinguish sources from adaptations, and plans from actual results.

YOUR NEXT STEP

Bring your first question.

Enrolment is being prepared. Read the material and choose a personal starting point.

01 Explore the three projects and the preparation suggested for each role.

02 Write your question and save a personal note.

03 Twelve is the planned capacity. No members have been recruited yet.

04 Reading this material or saving a note does not submit an application or booking.

REFERENCES / EDITION 08

Sources and what comes next.

Build on the questions in earlier work, then test the adaptations in our own setting.

01 FarmLab · TechRice · Python workshops · QR Inventory · Solar Paper Lantern

02 These are external reference projects, not Hacker Farm Studio’s completed work.

03 Next checks: runtimes, components, licensing, field safety and facilitators

04 2026-10-10 · v08 / Introduction, presentation and first-season operating plan
